**Key words:** COVID-19, invasive mechanical ventilation, diaphragm dysfunction, myosin, ventilation-induced diaphragm injury.

Supplementary Figure 1. Fast fiber content and their number relationship with mechanical ventilation. Fast myosin content showed a positive linear correlation with the percentage of controlled mechanical ventilation on total LOS<sub>ICU</sub> ( $R^2=0.446$ ,  $p=0.006$  as shown in panel A). On the opposite, their number decreased regarding the same ventilation parameters ( $R^2=-0.34$ ,  $p=0.022$  as shown in panel B).

Supplementary table 1. Pre-existing conditions and relevant medical history

	OVERALL (n = 29)	CLUSTER 1 (n = 14)	CLUSTER 2 (n=15)	P value
Cardiovascular	19 (65%)	9 (64%)	10 (66%)	>0.99
COPD	4 (14%)	2 (14%)	2 (13%)	>0.99
DM type 2	6 (21%)	4 (28%)	2 (13%)	0.38
Dyslipidemia	4 (14%)	2 (14%)	2 (13%)	>0.99
CKD	4 (14%)	2 (14%)	2 (13%)	>0.99
Solid neoplasia	1 (3.5%)	-	1 (6.5%)	>0.99
Other	11 (38%)	6 (43%)	5 (33%)	0.71

COPD, chronic obstructive pulmonary disease; DM, diabetes; CKD, chronic kidney disease.

**Supplementary table 2. Correlations between ventilatory parameters and anatomopathological findings.**

Correlations		CLUSTER 1	CLUSTER 2
% time under assisted ventilation and	slow myosin fibers%	$R^2=-0.025, p=0.584$	$R^2=0.001, p=0.983$
